Modernized and integrated environments with OpCon and AMT Framework

OpCon and AMT Framework: True Legacy Transformation

Today, it's imperative that all your systems interact efficiently with each other. In the past, IT operations were formed into silos as companies struggled to manage the different components of their businesses. Various applications and middleware were added to help bridge the gap. Increased complexity has made it difficult for IT operations to manage the ever-changing business needs of organizations large and small. This is specifically true when migrating to a new platform and when modernizing legacy applications. In the migration project, often the automation of processes is overlooked or is only considered (too) late in the process.

In order to ensure business continuity and efficiency, infrastructure and business application automation is key. That is why Asysco and SMA Technologies are joining forces.

Through the tight integration between Asysco's AMT Framework and SMA Technologies OpCon, we are able to offer you:

- ☐ A true like for like migration, including code, data, batches, jobs/workflows, operations, security, interfaces and business process automation

- ☐ Integration of the new AMT framework with other environments managed from a single-point of control with OpCon

- ☐ A target environment that delivers at least the same, but more often a better level of quality and performance

- ☐ Automated and modernized IT that enhances companies oper-ational efficiencies

Combining Powerful Solutions

With this strong combination of solutions, you will be able to ma nage your various application components from a single point of control. You can be sure that after the migration your AMT framework is fully integrated with your business processes. You will:

☐ Eliminate errors due to inoperability

☐ Drastically reduce the number of interfaces

☐ No longer need specialists in all different process areas

About the AMT Framework

The AMT Framework provides clients with a migration path to scala ble, tiered, open systems architecture. Asysco is able to of-fer orga nizations a conversion process that moves legacy appli-cations to the .NET development environment, with a (physical or virtual) Windows Server production environment supported by a modern relational database management system. Asysco's sophisticated migration technology (AMT) is the benchmark in the industry in the area of quality and maintainability. The AMT Framework has proven itself in all different sizes of systems and within every industry.

World Class Automation with OpCon

OpCon is a cross-platform and cross-application IT solution that integrates and automates your entire business from a single point-of-control.

About Asysco

Asysco offers cloud-proven, turnkey technology solutions and expertise for delivering high quality transformation and modern-ization without failure.

This transformation enables organizations to reduce cost while increasing flexibility, facilitating streamlined business process integration and innovation.

Asysco was founded in 1979 and has offices in Coevorden the Netherlands and Atlanta, Georgia, USA. Our motto: "Unlocking Your Legacy Value" expresses our confidence that legacy trans-formation projects make a lot of sense, the risks can be well ma-naged, and the resulting value is simply outstanding.
