

## Feature Guide

# OpCon workload automation platform and job scheduler

OPCON

OpCon combines reliability with intense scalability, capable of handling 150 daily jobs or 150,000. Our task-based subscription model makes it easy to add more automation without billing surprises or hidden fees.

### Scheduling/Event-driven flexibility

OpCon features three ways to initiate workflows: scheduled with granular frequency controls, event-triggers tailored to your chosen dependencies, and on-demand self-service workflows that can be initiated by both IT and non-IT personnel from a simple interface. We provide the flexibility to change future schedules without disrupting current ones.

### Web Services & APIs

Integrate 3rd party applications seamlessly with our Universal Web Services Connector. OpCon has an extensive library of legacy and modern connectors and can integrate with almost any application via REST API or command line interface. OpCon breaks down silos and makes it easier to manage how third party apps sync with your IT system.

### History and Audit reports

Every single change and job execution is tracked, keeping your business in compliance. This is why OpCon is trusted by financial institutions, government agencies, and other orgs that have strict reporting and data-retention requirements. Comprehensive event logs provide quick access to contextual information to simplify troubleshooting.

**Integrations: OpCon has an extensive library of already built connectors, as well as a REST API to communicate with almost any application.**

#### LEGACY CONNECTORS

- IBMi
- MCP
- zOS
- OS2200
- Linux/Unix

#### CLOUD PLATFORMS

- MS Azure Logic App
- MS Azure VM
- MS Azure Sentiment Analysis
- MS Azure Storage
- AWS EC2

#### ERP/ITSM CONNECTORS

- SAP (Hana, R3, CRM)
- SAP Business Objects
- SAP Data Services
- Infor
- ServiceNow

### Cloud and hybrid environment synchronization

Control all your IT processes across cloud and on-prem servers as if they were in the same environment. OpCon integrates with Azure, AWS, Google Cloud, and private clouds to automate the web of cross-environment workflows that keep your enterprise IT system running smoothly.

### Containerized platform

OpCon is ready to go with a Linux Docker image that can orchestrate complex, cross-environment workflows. See our blog post on Containerization

### Managed File Transfer

Automate the secure transmission of data across your enterprise and between trusted third parties with our integrated Managed File Transfer feature. From mainframes to open-systems, OpCon plugs in to your existing infrastructure to ensure that data is delivered exactly where it needs to go with fully auditable automated workflows.

## What's next?

Every future client has a unique environment configuration and specific challenges they're looking to solve. The next step is to schedule a conversation with SMA Technologies to discuss your IT system and automation goals.
