What Makes OpCon RPA Unique

With OpCon RPA, you bring together disparate business processes across the organization, place them within a single point of control, and remove stops where manual work is required to continue. OpCon RPA replaces manual, human interactions with websites, applications, systems, and interfaces to perform tasks such as data entry and extraction, form filling, file upload and download, report generation, and more.

It can help you complete the 'last mile' of automation by combining a robust RPA toolset with OpCon's enterprise-grade scheduling and workload automation and orchestration abilities, purpose-built for financial institutions and insurance companies.

What does it accomplish?

Without OpCon RPA & OpCon, processes stop for human intervention—even if you're using other automation.

With OpCon RPA & OpCon, processes continue without human intervention.

How is it different?

Doesn't Take Over Your Desktop UI
Perform RPA web activities while you keep doing what you need to get done. OpCon RPA doesn't take over your desktop UI to perform its defined functions.

Execute Multiple Replays
Don't wait for one bot to finish before the next one starts. Execute multiple replays in parallel in the background with OpCon RPA.

Jump Between Different Programs in One Workflow
Workflows can jump between multiple programs. With OpCon RPA, different variables can send data in many directions, streamlining processes.

Integrates Directly with OpCon
OpCon RPA integrates with new and existing OpCon jobs. Use RPA to extend the robust capabilities of OpCon into jobs requiring manual intervention.

RPA for Your Industry
OpCon has worked with financial institutions for decades. Multiplying that expertise, OpCon RPA dramatically increases efficiency enterprise-wide giving your RPA workflows access to 70+ integrations and workload automation through OpCon.
